

HOW TO USE SAFECRYPT

Download SafeCrypt

Follow the set-up wizard for installation on Windows or macOS

Create a new drive

Enter your SafeConsole connection token provided by your SafeConsole Admin

Select your SafeCrypt drive name and location

The SafeCrypt encrypted virtual drive will mount locally, but you can point the system storage to any location

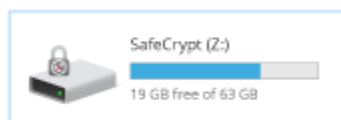

Set up a password

SafeCrypt utilizes SafeConsole's password help to reset forgotten user passwords to prevent data loss

Encrypted virtual drive

Save your files to the SafeCrypt encrypted virtual drive for FIPS140-2 validated AES 256-bit encryption

Your drive is managed by SafeConsole

Through the SafeConsole portal, admins can audit activity, reset passwords and more
